

CSS Fundamentals & Styling Guide

Class notes covering CSS insertion methods, selectors, colors, typography, background styling, and border mechanics.

Definition: Cascading Style Sheets (CSS) is used to style and layout web pages, enabling custom typography, color application, visual alignment, and structural decoration.

01 Three Ways to Apply CSS

CSS rules can be embedded into web projects using three distinct insertion methods:

1. Internal CSS

Applied directly inside the HTML page using a `<style>` block in the head section.

```
<style>
  b {
    font: bold 13px;
  }
</style>
```

2. Inline CSS

Written directly within the target HTML element tag using the `style` attribute.

```
<p style="color: blue;
font-size: 18px;">
  Text content...
</p>
```

3. External CSS

Linked from an independent `.css` stylesheet file using the HTML `<link>` tag.

```
<link
  rel="stylesheet"
  href="style.css">
```

02 CSS Selectors: Class vs. ID

Classes and IDs allow target styling of specific elements across an HTML document.

Class Selector (`.dot`)

Reusable: Multiple elements across the page can share the exact same class name for uniform styling.

```
<!-- HTML Declaration -->
<div class="xyz"></div>

/* CSS Rule Target (.dot) */
.xyz {
  color: #2563eb;
}
```

ID Selector (`#hash`)

Unique: Must be unique per HTML document. An ID can only be assigned to a single page element.

```
<!-- HTML Declaration -->
<div id="main"></div>

/* CSS Rule Target (#hash) */
#main {
  padding: 20px;
}
```

Selector	CSS Prefix	Usage & Scope	Primary Purpose
Class	<code>.</code> (Dot)	Multiple elements per page	Component patterns, UI elements
ID	<code>#</code> (Hash)	Unique (Exactly 1 per page)	Major page anchors, unique containers

03 CSS Color Formats

Colors in CSS can be defined through three standard notations:

Named Color
color: Red;

Hexadecimal
color: #333333;

RGB Notation
rgb(255, 99, 71)

```
p {  
  color: Red;           /* Color Name */  
  color: #333333;       /* Hexadecimal Code */  
  color: rgb(255, 99, 71); /* RGB Value (Red, Green, Blue) */  
}
```

04 Typography & Font Properties

Individual Font Declarations

```
body {  
  font-family: "Open Sans", Arial;  
  font-size: 20px;  
  font-style: italic;  
}
```

Font Shorthand Syntax

Combines style, size, and font family into a single property line:

```
body {  
  font: italic 20px "Open Sans", Arial;  
}
```

05 Background & Border Styling

Background Properties

```
div {  
  background-color: #FFC000;  
  background-image: url("image.png");  
  background-repeat: no-repeat; /*  
  repeat | repeat-x | repeat-y */  
  background-size: cover;  
}  
  
/* Background Shorthand Rule */  
div {  
  background: url("image.png") center  
  no-repeat;  
}
```

Border Controls

```
.box {  
  border: 2px solid #2563eb;  
  border-radius: 8px;  
}
```

Note: border sets width, style, and color.
border-radius rounds element corners.

06 Quick Property Reference

Property Category	Key CSS Properties	Common Value Options
Styling Methods	Inline, Internal, External	style="", <style>, <link>
Typography	font-family, font-size, font-style	"Open Sans", 20px, italic
Background	background-color, image, repeat, size	#FFC000, url(), no-repeat, cover
Border	border, border-radius	2px solid color, 8px
